This research work belongs to a group of authors, contains an in-depth study of the  
health preservation problem, fixes the scientific priority, provides society with the primary  
scientific information on health promotion, the formation of environmental responsibility.

The monograph is intended primarily for scientists and meets by its content and form  
of publication, but will be interesting for a wide range of public. The clarity of the wording  
and presentation of the material, the logic of coverage for the basic ideas and concepts in it  
are of particular importance. Requirements to the essence of the presentation of the  
material in the sections of the monograph, similar to the requirements of other scientific  
publications with certain features of their purpose. Moreover, the issues raised in this  
monograph are still the subject of lively discussion among contemporary domestic and  
foreign scholars.

We will be glad if the monograph will not leave you indifferent and you will want to  
share your impressions of it.
